THE MARYLAND TYLER FAMILY

Though the first of the family is said to have come to this country from England, as early as 1660, and settled in Maryland on the Patuxent River, there is no authentic knowledge of any member earlier than ROBERT TYLER, who in his will calls himself ROBERT TYLER, SR. His will was executed December 29, 1735, and proven on August 24, 1738. By his will he seemed to have had quite a valuable estate, both real and personal which he left to his widow.

ROBERT TYLER married SUSANNA DUVALL, daughter of MARCUS DUVALL, who came to this country from France, and he was the first of the TYLER name in Maryland. They had eight children. EDWARD, the eldest, married ELIZABETH DUVALL, daughter of SAMUEL DUVALL, and they had twelve children. SAMUEL, son of EDWARD TYLER, married SUSANNA DUVALL, daughter of JOHN DUVALL, and they had eleven children.

GRAFTON, the youngest child of EDWARD TYLER, married ANN PLUMBER as his first wife, and —

McGILL as his second wife. By his first wife, ANN PLUMBER, he had two sons, SAMUEL TYLER and GRAFTON TYLER. SAMUEL TYLER married Miss BAYLY of Frederick, Maryland, and had two children, JOHN and ELIZABETH. GRAFTON TYLER married MARY MARGARET BOWIE, daughter of WALTER BOWIE, of Locust Grove, Prince George County, Md. They had twelve children as follows:

MARY AMELIE, born December 19, 1836, Locust Grove, Md.

ELLEN SKEEL ADEE, born April 10, 1849; died July 16, 1918.

1. The first part of the paper is devoted to a general discussion of the problem of the existence of solutions of the system of equations

$$\frac{dx}{dt} = f(x, y), \quad \frac{dy}{dt} = g(x, y),$$

where f and g are continuous functions.

It is shown that if the functions f and g satisfy certain conditions, then the system has a unique solution.

2. The second part of the paper is devoted to a study of the stability of the solutions of the system.

It is shown that if the functions f and g satisfy certain conditions, then the solutions of the system are stable.

3. The third part of the paper is devoted to a study of the asymptotic behavior of the solutions of the system.

It is shown that if the functions f and g satisfy certain conditions, then the solutions of the system approach a certain limit.

4. The fourth part of the paper is devoted to a study of the bifurcation behavior of the solutions of the system.

It is shown that if the functions f and g satisfy certain conditions, then the solutions of the system exhibit bifurcation behavior.

5. The fifth part of the paper is devoted to a study of the chaotic behavior of the solutions of the system.

It is shown that if the functions f and g satisfy certain conditions, then the solutions of the system exhibit chaotic behavior.

6. The sixth part of the paper is devoted to a study of the periodic behavior of the solutions of the system.

It is shown that if the functions f and g satisfy certain conditions, then the solutions of the system exhibit periodic behavior.

7. The seventh part of the paper is devoted to a study of the quasi-periodic behavior of the solutions of the system.

It is shown that if the functions f and g satisfy certain conditions, then the solutions of the system exhibit quasi-periodic behavior.

8. The eighth part of the paper is devoted to a study of the ergodic behavior of the solutions of the system.

It is shown that if the functions f and g satisfy certain conditions, then the solutions of the system exhibit ergodic behavior.

9. The ninth part of the paper is devoted to a study of the mixing behavior of the solutions of the system.

It is shown that if the functions f and g satisfy certain conditions, then the solutions of the system exhibit mixing behavior.

10. The tenth part of the paper is devoted to a study of the topological behavior of the solutions of the system.

It is shown that if the functions f and g satisfy certain conditions, then the solutions of the system exhibit topological behavior.
